WALKMAN

The white disk above passes the audio into the surface of the Polaroid, which is raised off the wall about 1/4 inch. The entire plane of the Polaroid becomes a loudspeaker. The audio is a recording from the actual photo session--here from the flash unit.

12— The transducer is placed in a slit cut into the surface of the photo and the wire is passed thru a hole made in the photo.

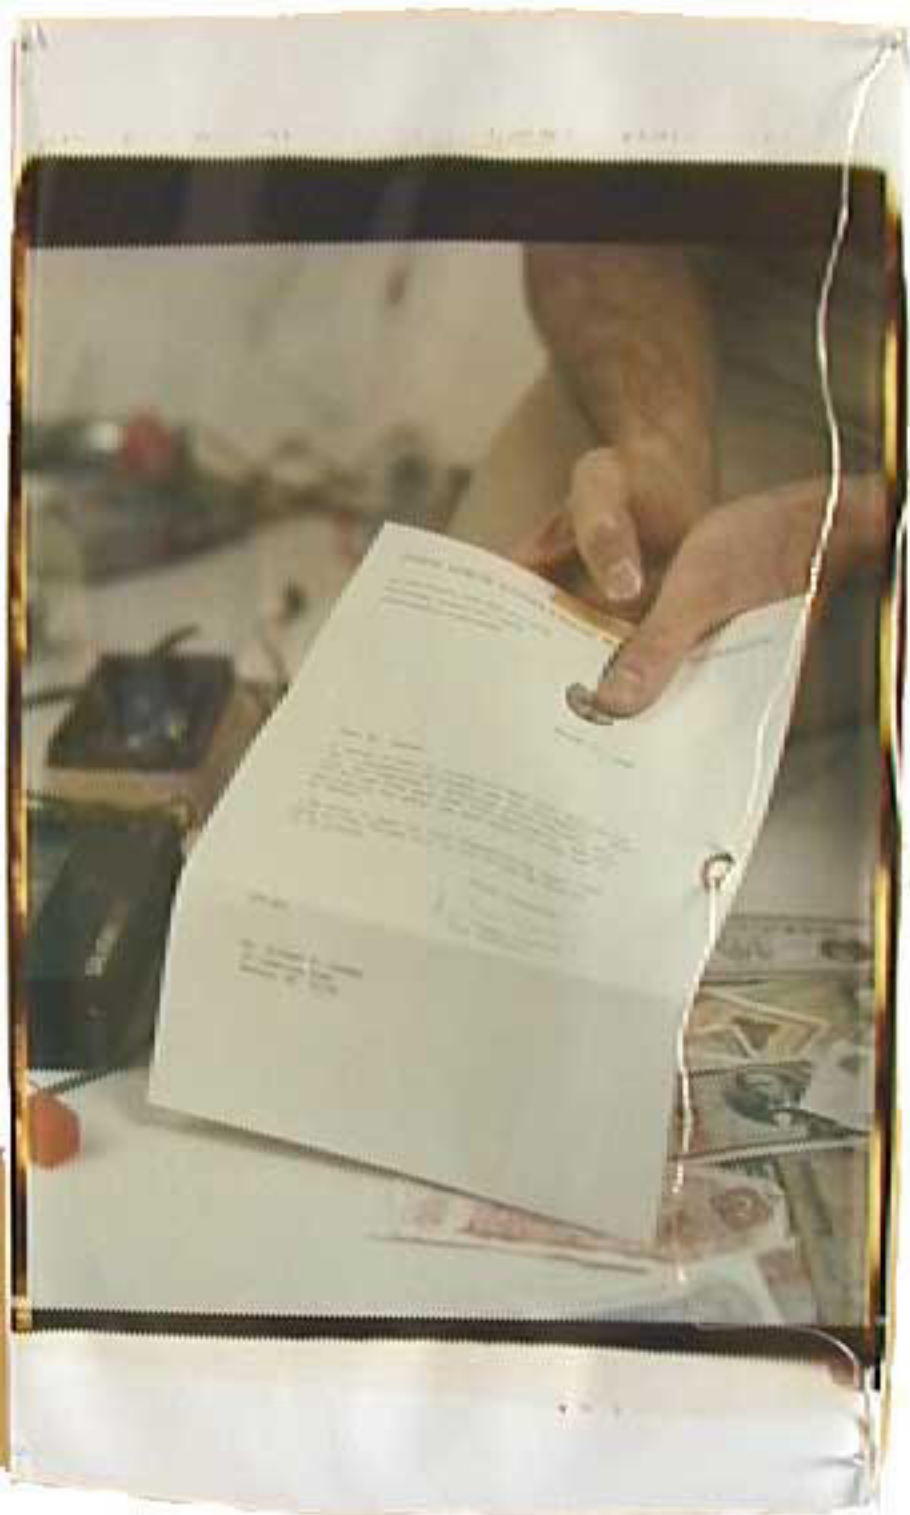

Please ensure that you are wearing your seat belt at all times.  
Please do not drink and drive.  
Please do not use your mobile phone while driving.
